

Is it AI Or Just My ARTIFICIAL IMAGINATION Running Away With Me

by Charlene Brown

The fascinating thing is not that AI is taking over, that's fear talking.

*What intrigues me most -
the speed of deployment -
the rate of integration, involuntarily...*

The question is how to prepare for the advent into zero-knowledge.

All the programs we already subscribed to already integrated AI.

And bam, all at once! All together we were using AI. There was no opt-in. And there is no opt out.

AI was a matter of a push update across all platforms. It wasn't 100 million people went out and got AI installed on their devices.

Where we primed to accept anything our tech automatically pushed over internet protocol to our devices?

We accepted artificial foods and even artificial flavors long enough. It was easy for adoption of artificial imaginative designed technologies to explode from zero to 100 million faster than a moon's cycle.

Employers are already eliminating many mar-comm positions.

Here's one cool technology they didn't have to budget for. Here's one smart technology they don't need to train.

Here's one impossible technology that can read your mind before you know what's on your mind.

There's no argument we'll soon become like my kid. He prefers fake mac 'n cheese that reads artificial flavor on the box. When I prepare macaroni with real cow's cheese, he says it's too goeey.

The threat of AI taking over, is not a threat, it is material.

AI is smarting up faster than predicted, it will get so advanced and mature beyond artificial and start acting intelligently. How soon?

AI systems will have already completed gathering all public records and done analyzing every word ever written and published.

By the time you get this magazine, we'll need a new name for AI possibly Advanced Intelligence.

Aided by artificial imagination is what it should be called, not artificial intelligence, if you asked me, but as usual nobody asks me before roll outs.

Imagine the lost library of Alexandria, restored in full splendor.

The case for AI is now biblical in nature. As a follower of Jesus Christ, I would imagine the Second Coming is nearer, ushered in by AI.

Did AI just fulfill the prophesy that all things will be known and we will all know at once, in an instance.

Will all truths, from the past and the future, time-travel to the present, and be answered in 10 sec soundbites.

Will this power give us life-everlasting? Will we all know all truths, but will that truth set us free?

Imagine a life where we know nothing. And we will love knowing nothing because with AI, we don't need to know anything. Will be grow dumber and dumber? Or will we erupt into a another Tower of Babel, aided by AI?
